Business Trunking
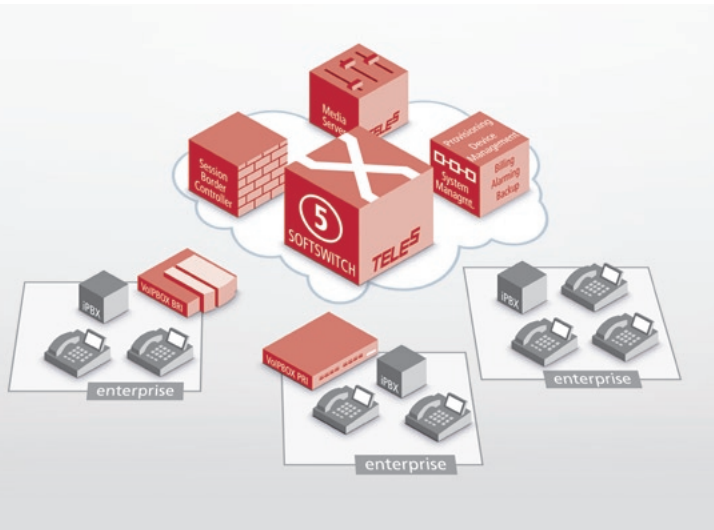

TELES C5 Business Trunking is a turn-key solution that enables service providers to deliver voice and data services to businesses.

❚ Carrier-grade reliability and availability

❚ Standard based and scalable

❚ Connects VoIP Islands (Business Trunking)

❚ Interconnects with existing PBX Systems

❚ Conferencing service

❚ PSTN Interworking over ISDN or ISUP/SS7

Expands your services and profit
Connect your business customers' geographically distinct premises and deliver both voice and data. Then, sit back and watch your profits rise. TELES C5 Business enables you to deliver converged services and, as a result, save the costs arising from multiple and redundant infrastructure.

Satisfies your business customers
Offer your business customers a single, unified extension plan and watch them smile. A single extension plan simplifies their work, eliminates mistakes, and saves them time.

Then, point out the rich suite of features. In addition to classic routing features, TELES C5 Business offers conferencing, time dependent routing, anonymous routing, and called number manipulation. Direct Dial-in (DDI) enables a user to dial directly from a public network to any PBX internal subscriber.

Finally, remind them that their services are delivered by the one provider. Businesses prefer having services delivered by a single provider because that focuses communication on a single address at a single phone number.

Saves you OPEX and CAPEX
Do away with the maintenance costs associated with separate voice and data networks and the expenses associated with equipment peering. At the same time, by leveraging your existing infrastructure with standard based, grow-as-you-go TELES C5 equipment, you maximize profit and minimize OPEX and CAPEX.

Simplifies system management
Integrated system management puts you in control and saves you OPEX. Plus, it's all centralized and remote. Manage the entire system from the comfort of your office.

Easy transition to IP Centrex
Once a TELES C5 Business solution is in place, the move to IP Centrex is only a small step. The future is now, and we are already there.

Business Trunking

APPLICATION

The TELES Class 5 Business Trunking solution enables service providers to deliver VoIP telephony between enterprise sites and to support PSTN telephony service to enterprises. By using existing broadband connectivity to bypass the PSTN, service providers save costs and can bundle voice and data services while maintaining the enterprise's existing infrastructure. With Business Trunking, the service provider can also connect different enterprise premises and provide a unified numbering plan for the entire enterprise. The TELES Class 5 solution includes centralized system management and easy integration into billing, alarming, and backup systems.

KEY FEATURES

Connection of VoIP islands (Business Trunking)
Interconnection with existing PBX systems
PSTN termination over ISDN or ISUP/SS7
Direct Dialling Incoming (DDI)
Flexible routing engine
Unified Extension Plan
Early Media
Fax (T.38)
Time dependent routing
Called number manipulation
Comprehensive System Management
Customer Self-Service
External Provisioning Interface
